FEATURED PROJECT:
HARRISON COMMONS,
HARRISON, NJ
FABLOGIC G-500

5 things to look for when specifying composite metal panel systems

FABLOGIC panels are **LEED certified** to help earn points toward your project's Green Building rating—and ultimately LEED certification.

All FABLOGIC panels are **ASTM tested** (E-330, 331 and 283) by a certified testing laboratory. You and your clients can be assured that your FABLOGIC panels are high-quality and state-of-the art.

FABLOGIC panels have **stiffeners** that allow for deflection, expansion and contraction, and interlocking perimeter extrusions with two floating edges that allow for movement, providing code compliance.

Our panels also have **joinery-specific extrusion**s — caulk (FABLOGIC C-500), hard gasket (G-500), rain screen (D-500), or internal gasket and fully weather-sealed (I-500) — enabling for flexibility in design, tailored to your clients' needs and wants.

FABLOGIC **routs and folds** are reinforced with structural sealant and extrusions, providing strong, durable and low-maintenance wall panels.

To see our portfolio of completed projects and to learn more about our state-of-the-art composite metal panel systems, visit www.fablogic.com or call (800) 245-0210.
